

## SQUAD WATCHES SEVEN SEAS & OCEAN

Both these models were developed in close collaboration with the German army and have numerous practical features for missions on land or under water.

A rotatable bezel for perfect timing on missions or when diving, the screw-down crown positioned between 9 and 10, or the magnetic field protection and the helium valve - with a water tightness of 100 ATM they are the perfect companions for diving, outdoor activities or for daily use. The built-in Laco 24 automatic movement is based on the Swiss calibre ETA 2824.2.

SEVEN SEAS

### STRIKING DESIGN UNITED WITH FUNCTIONALITY

The matt black PVD coating makes the stainless steel case particularly scratch-resistant. The dial with white minute scale and raised luminous markers and numbers that are coated - like the hands with Superluminova C3 - for superb readability in the dark. The rubber strap with stainless steel clasp and screwed-on lugs make it pleasant to wear.

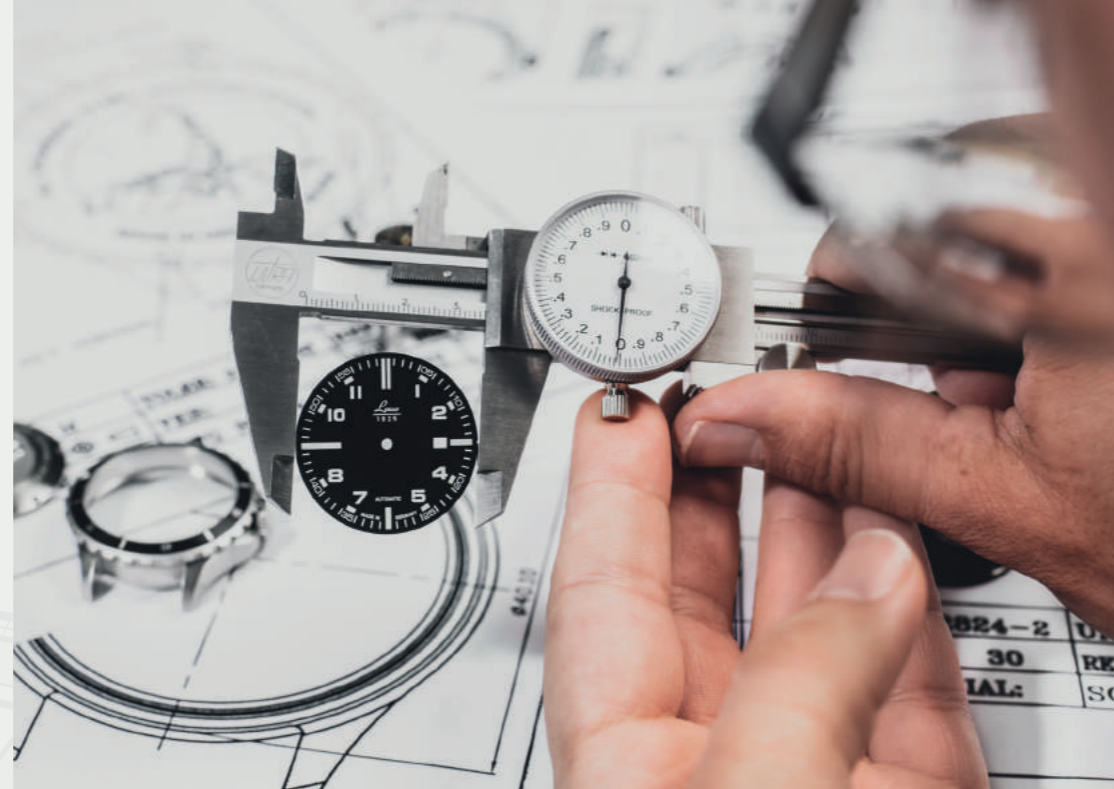

The Seven Seas model is delivered in a sturdy waterproof and dust-proof protective box.

OCEAN

### FUNCTIONAL SYNTHESIS OF THE ARTS

The Ocean model has all the functional properties of the Seven Seas. For optical reasons, only the stainless steel case (diameter 46 mm) of this model is not coated but matt-blasted, which allows the charismatic construction material of steel to exude the aura of tried-and-tested, traditional watch-making techniques.

## FROM 1925 TO THE PRESENT - TIMEPIECES WITH CHARACTER

Authentic, passionate and accurate - Laco stands for watches of the highest quality. Our claim to superbly crafted, highly functional products with a contemporary design is part of our eventful corporate history.

We remain committed to our traditions, at the same time we look ahead and create innovations that meet the spirit of the times. Our philosophy is continuous development and progress.

## SPORTS WATCHES

HIMALAYA, AMAZONAS, ATLANTIK, MOJAVE

Fashionable sports watches by Laco – as versatile as a scorpion.

Robust case, double-curved, extremely hard and anti-reflective sapphire crystal, fluorescent markers and watch hands and watertightness up to 30 ATM. Our sports watches are resilient, flexible and glow in the dark – properties that predestine these watches for numerous habitats, just like the scorpion. Our sports watches are available in the four colour variants Himalaya, Amazonas, Atlantik and Mojave – in each case with a metal or rubber strap.

A particular highlight of all models is the coherent engraving on the case bottom: a bas-relief of a scorpion.

HIMALAYA

### HIMALAYA

Sporty and functional with a puristic appearance. At great heights, extreme temperatures or in water, this model is a reliable companion in every terrain.

WWW.LACO.DE | INFO@LACO.DE

### AMAZONAS

Wild terrain around the world's most water-rich river – it was not only the green colour accents of the tropical rainforest along the Amazon river that gave the watch its name.

ATLANTIK RB

### ATLANTIK

The world's second largest ocean gave this model with its sporty blue colour accents its name. With a water tightness up to 30 ATM, these watches are suitable for all activities under and above water.

### MOJAVE

Inspired by the warm light of the Mojave desert, accents in bright orange provide a highly functional contrast and a sporty look.

### SQUAD WATCH ATACAMA.2

In special situations, a man needs a watch that is truly functional. In collaboration with the German army and special units we have developed a particularly reliable and robust squad watch.

The PVD coating of the matt black stainless steel case makes it particularly scratch resistant. It is even more comfortable to wear thanks to the unconventional 12 o'clock position of the crown, which is built into the strap, and thus is particularly protected against external influences. The unidirectional rotating bezel, with a reverse minute scale, is particularly suitable for coordinating joint operations.

Inside the Atacama.2 is fitted with the reliable automatic movement Laco 24 – based on the Swiss caliber ETA 2824.2, and can admired through the sapphire crystal bottom. The watch hands, numbers and markers are coated with Superluminova, ensuring optimum readability in the dark. The Atacama.2 combines unique design with a resilient construction for daily use under difficult conditions.
